Abstract— The purpose of this Literature Review is to emphasize the significance of Knowledge Management (KM) in organizations and explore ways to integrate Artificial Intelligence (AI) in capturing Tacit Knowledge (TK), leading to innovation in organizational learning and to investigate the impact of Organizational Culture on Knowledge sharing among employees in the organization. The review is based on academic sources and scholarly research examining existing theories and frameworks in AI and TK. The key findings suggest that humans remain irreplaceable in capturing TK, emphasizing the significance of Human-AI collaboration to embed a culture of continuous learning and drive innovation in organizations. The limitations of the literature review are the limited availability of research in the context of AI in capturing TK. A precise knowledge gap has been identified in transparent methodologies in capturing TK which shows the need for conducting future research in this context.

Keywords—*Artificial Intelligence, Tacit Knowledge, Innovation, Organizational Learning, Knowledge Management (KM).*

I. INTRODUCTION

This section is structured into subsections, providing a comprehensive introduction to the literature review, starting with the Background, problem statement, Research questions and finally, the contribution to the field of KM.

1.1 Background

The rapid advancement of emerging technologies taking place in this digital era, specifically in the field of Artificial Intelligence, has resulted in the evolution of the operations and processes in the organization in several disciplines, including Knowledge Management (KM) [1], leading to a boost in the effectiveness and productivity of employees and hence an increase in Organizational Performance [2] and with the growing importance of KM in Organizations to ensure the institutionalization of knowledge for the continuity and stability of practices over time, Organizations must explore the integration of AI in capturing (TK) of employees which will be considered as one of the innovative practices in Organizational Learning as recent studies have shown that AI is essential to improve services in this digital era.

1.2 Problem Statement

In this part of the world, some employees are resistant to sharing knowledge with their peers and subordinates, fearing that others will take their place and they will no longer be needed in the organization. Such behavior affects the organization's culture, leading to poor KM, incompetent employees, and poor Organizational Performance due to a lack of knowledge transfer, particularly TK, when an employee leaves the organization. Moreover, not all organizations recognize the importance of KM and understand the whole process where the role of strategic human resources is considered crucial in such cases where they will have to develop techniques to encourage employees to share knowledge in order to have a robust KM system that is one of the most challenging aspects of KM and is difficult to manage. In addition, it is challenging to capture TK in organizations, and no systematic process documents Tacit knowledge, unlike that of explicit. [3]

1.3 Research Questions

This Literature review aims to explore critical studies, extract findings, and analyze the results. Hence, it is crucial to formulate proper research questions [4]. This literature review aims to examine the Integration of AI in capturing the TK of the employees, leading to innovation in Organizational Learning. Hence, the following questions will be addressed in this review:

1. How can AI effectively capture and interpret TK?
2. How can integrating AI with KM lead to innovation in Organizational learning?

1.4 Contribution to KM

This literature review will add to the scholarly research on the Integration of emerging technologies in the field of KM, specifically in capturing TK, as most scholarly research was done on the success of AI in managing explicit knowledge, which makes this topic somewhat contemporary, challenging the traditional application of AI, proposing new methods in capturing subconscious experience and knowledge, driving learning and innovation in organizations, and facilitating a culture of continuous learning, making this literature review highly relevant in the digital transformation era where

organizations are exploring new ways of leveraging technology for strategic advantage.

1.5 Structure of Paper

To address the context of this paper, the study will delve into the Integration of AI in capturing the TK of employees, leading to innovation in Organizational Learning in the subsequent literature review section, addressing the research gaps mentioned in existing research followed by the methodology and findings resulting in the discussion part that attempts to explore ways that AI can be used in capturing and Interpreting TK of employees and recommendations to address the challenges derived dismissing with the conclusion section suggesting areas for further research.

II. METHODOLOGY

The scope of the literature review includes academic articles and excludes all other sources, such as conference papers and dissertations. Due to the rapid development of artificial intelligence, the period was not specified to include the most recent studies done in this context. The inclusion criteria were articles focusing on TK, AI, KM, Organizational learning, and innovation, particularly papers that integrate AI in capturing TK. The language was limited to English in the selection criteria.

The geographic region was not specified in the search criteria as the focus was to assess the context of AI in capturing TK, leading to innovation in Organizational learning based on recent studies. In Table I. and Fig. 1., the map illustrates the number of papers extracted based on the geographical region. The selection process excluded irrelevant topics and nonacademic publications.

TABLE I. NO.OF PAPERS BASED ON COUNTRY/GEOGRAPHICAL REGION

Country	Geographic Region	Number of Papers	%
USA	North America	2	10.00%
UK	Europe	1	5.00%
Bahrain	Middle East	4	20.00%
Malaysia	Asia	1	5.00%
Nigeria	Africa	1	5.00%
Colombia	South America	1	5.00%
Australia	Australia	2	10.00%
Kuwait	Middle East	1	5.00%
Taiwan	Asia	1	5.00%
Germany	Europe	1	5.00%
Not Specified	Unknown	1	5.00%
Indonesia	Asia	1	5.00%
India	Asia	1	5.00%
Poland	Europe	1	5.00%
Canada	North America	1	5.00%

Fig. 1. GEOGRAPHICAL REGION OF RESEARCH PAPERS

The search used keywords such as Artificial Intelligence, Tacit Knowledge, Innovation, Organizational Learning, and Knowledge Management. The search used Web of Science databases such as Scopus, Science Direct, Google Scholar, Research Gate, and Emerald. During the search process, a challenge was faced in finding papers done in the context of AI in capturing TK, which shows the gap in research and the need for scholarly research in this field. Moreover, Table III. and Figure I show that 31% of the papers were carried out in the Middle East Region in the context of GCC countries.

III. LITERATURE REVIEW

This literature review builds upon previous research on integrating emerging technologies in KM. However, it goes beyond the traditional practices of KM. It explores ways that AI can capture and interpret the TK of employees into tangible information that will ensure the stability of practices in the organization in the long-term, leading to innovation in Organizational learning and creating a culture of continuous learning, which is considered an under-explored area, that will not only fill significant gaps in scholarly research but will also provide organizations with data that can be translated into actions, to leverage AI for the sustainability of Innovation and Organizational learning.

A. Significance of KM in Organizations

In today's dynamic world based on competition among different industries to thrive and gain competitive advantage, knowledge has become the primary strategic asset if organizations properly manage it [5]. Realizing that knowledge is the most valuable asset in organizations, which is the first driver of organizational performance and success, drives organizations to invest in capturing knowledge to transfer it across employees and stakeholders [3].

The study also argued that initiatives of KM in public sector organizations are weak because of deploying technology and ignoring issues related to Organizational Culture, which is considered the baseline for the success of

KM in organizations as sharing knowledge helps the organization to grow and gain competitive advantage since many studies have shown that organizations who have proper KM systems in place become stronger and progress faster than others. In addition, knowledge is the main source that improves organizational performance and is vital to competitive advantage [2].

The fact that economies are shifting from traditional to knowledge-based economies encourages organizations to consider knowledge a sustainable approach to proving their presence in the market. Two types of information are used to communicate systematically and regularly between employees in an organization and stakeholders which is split into two types that are implicit information, known as TK and Explicit information, where 90% of information is ingrained in people's minds, where both are considered as resources that help organizations in gaining competitive advantage in the market. Hence, KM and knowledge sharing are the main activities that HRM must consider, where the collection of information, problem-solving, circulation of experience, and extracting information leads to the implementation of innovative initiatives, which are part of the KM approach.

Due to the high competition in today's dynamic market, knowledge is now considered the main factor leading to the competitiveness and success of the organization. Hence, when an organization loses a strategic employee, regardless of the reason, it faces a decrease in the capability of the organization, which is considered a weak signal that makes organizations strive to develop ways for the proper management of knowledge [5]. Proper KM enhances the process of making decision-making as it is based on data and information, leading to what is called evidence-based decision-making [6].

B. Impact of Organizational Culture on KM

Organizational Culture is affected by employees' traits that can either lead to contributing to knowledge sharing or not. Some employees lack confidence in their skills and competencies, impacting their willingness to share their knowledge with others [7]. Another factor that impacts knowledge sharing in organizations is the technological barrier where employees are resistant to using systems because they lack technical skills, which is also called Technophobia, which requires an intervention by the organization in providing support to those individuals to develop their skills and increase their self-confidence in using new systems in addition to embedding user-friendly systems that are easy to use and access by all employees [3].

Even though TK is embedded in the heads of employees, some organizations argue that such knowledge belongs to the organization, resulting in personal disputes leading to ineffective KM and can be resolved by clearly being noted in the contract between the organization and the employee when it comes to knowledge to avoid any personal disputes in the future [8]. In an organization where there is harmony among team members, the knowledge-sharing practice is relatively high; on the contrary, when team members have inevitable disagreements, they resist sharing their experience and knowledge with other team members, where it is the role of managers to constantly monitor the relationship between their team members to avoid any negative consequences that impact Knowledge-sharing in the organization. Some

employees struggle for power and compete with others, leading to conflicts. In some cases, in organizations where knowledge is power, some employees resist sharing information and make others feel bad for not providing the required knowledge. Organizations must invest in ways to help create a knowledge-sharing culture and capture TK whenever possible, transforming it into explicit knowledge by developing policies and procedures to reflect it [3].

In a recent study on Organizational Culture and the sharing of knowledge, it has been found that trust, organizational structure, and rewards positively relate to the sharing of knowledge in organizations. In addition, the study stated that individuals are influenced by the culture and traditions of their tribes and families, especially in the Arab region, which are factors that define individual behaviors and beliefs that strongly influence the organization's performance [8]. The study has shown that trust and introducing reward systems have a strong influence on the sharing of knowledge as well, in addition to the organization structure, as traditional structures are complicated with the levels of responsibilities and authorities in accessing specific information where managers have recently realized the downfalls of bureaucracy in organization structures, which leads to slowing the process of information flow consuming significant amount of time due to the journey of passing through several levels.

C. Promoting a culture of knowledge sharing

According to a study on the factors affecting knowledge-sharing in a Kuwaiti Embassy, organizations can promote a culture of Knowledge-sharing by encouraging their employees to share information and experiences. The study has also highlighted the importance of IT's capacity for Knowledge-sharing as it serves as a foundation in the cycle of KM [3]. Organizations aiming to enhance knowledge-sharing practices must develop strategies and techniques to encourage employees to share their TK. Knowledge-sharing is like manners that enhance communication and relationships among all employees. Organizations can capitalize on social activities to create and promote a culture of TK sharing through social interactions, creating new knowledge as a foundation for innovation and competitive advantage [2].

One of the main challenges in Knowledge-sharing is the collaboration of employees to achieve the goals of the organization and increase performance outcomes through the sharing of knowledge with others, which is the role of human resources to investigate ways of changing the culture of the organization as many organizations consist of different cultures and different backgrounds which make it challenging for KM [9]. Organizations aiming to be successful in the digital transformation era must guide their managers on encouraging employees to share knowledge and learn from the organization's current knowledge, enhancing a culture of continuous learning.

For employees to innovate and implement new processes and ideas, a culture of Knowledge-sharing is necessary to spread knowledge across the organization. Connecting all employees and creating harmony and synergy among them is crucial, as each employee's capability to innovate significantly improves Knowledge-sharing in the workplace [10]. To promote Knowledge-sharing, introducing strategies

such as introducing rewards and incentives linked to Knowledge-sharing and integrating the level of knowledge transferred with performance appraisals and promotions might encourage employees to invest more effort in sharing TK with others [7].

D. Tacit Knowledge

TK is considered an informal knowledge type that cannot be transferred as it settles in the human mind and results from a person's experience [3]. Knowledge does not only exist in reports, documents, and archives but also in people's minds, which has been gained throughout their experience in the same job which is demonstrated by their behaviors and actions that are affected by beliefs and values, which shows that knowledge that stays in people's minds is of no benefit or power unless it is shared among others in the context of the organization.

TK was defined and described as knowing more than we can tell, which is the unconscious insights and intuitions that include both the technical aspects of know-how and why [8]. TK of human capital is a crucial aspect that must be given importance by organizations due to its direct relationship with employees' performance, which is also linked to the performance and value of the organization and impacts the quality of its outcomes.

Based on recent studies related to transferring TK, organizations are not aware of their TK and the fields of knowledge they have, especially in organizations that have gone through a change in management, which is an area that has to be explored [6].

E. Capturing Tacit Knowledge

The optimal way of capturing TK is through interviews where discussions and one-on-one meetings take place as studies have shown that TK cannot be shared with others through documentation or verbal explanations and is hard to capture as it is exclusive to the person who has it, which is one of the reasons of making TK challenging to capture. The information inside the person's cerebrum is called TK and is responsible for guiding the person's impressions, [1] Knowledge is shared in a single collaboration with individuals through discussions and analogies and is transferred over time, which makes it difficult to follow a structured way of capturing it. TK takes time to be transferred through appropriate tools such as manuals and books, getting guidance from the person and implementation [3].

Organizations can benefit from TK only if they can develop a technique to control the sharing of such information among their employees. Some methods of Knowledge-sharing were compared, which are technology, training, job rotation, and evaluation, where training was proven to be the most effective method for the transfer of TK with less effectiveness compared to the rest, except for the job rotation method, which did not influence at all on transferring tacit knowledge. Sharing TK is highly recommended in organizations as it creates new knowledge, refining processes and strategies [2].

Studies have shown that employees are unaware of their knowledge and cannot express their TK as it is related to the way they think and react, which is one of the challenges that have to be considered by organizations to explore ways to help employees in transferring TK among their peers and

teams across the organization to avoid the loss of knowledge upon turnover of employees which will cost the organization, especially if those employees are key people and conduct tasks that are directly related to the success of the organization [8].

One of the studies has identified a process that is used in transferring Tacit Knowledge, which is the SECI which stands for Socialization, Externalization, Combinations, and Internalization, and has tested which of those dimensions was effective in transferring TK where it has been found that Socialization and Internalization has a direct influence on the performance of the Organization, which is through the transfer of TK, where socialization refers to the process of transferring TK through social interactions in the working environment. Internalization refers to transferring TK to explicit knowledge by integrating practical work done by employees with organizational learning [8]. Another study has introduced a new concept called TERM, which stands for Tacit Experience Retention Management which is a framework that is designed to manage, capture and transfer TK of employees and is done by incorporating KM, Big data, and Customer Relationship Management (CRM) which works on recording and transferring knowledge in a systematic which enhances the processes and customer service of the organization. However, it explores the challenges associated with TERM, such as cultural and organizational nuances [11].

F. Impact of AI on KM

A study on how AI and Knowledge-sharing contribute to organizational performance has shown that implementing AI technology alone is insufficient to improve organizational performance. It must be complemented with Knowledge-sharing by developing a knowledge-based system used by everyone in the organization to ensure sustainable organizational performance for business operations in a rapidly changing digital era [2]. Moreover, AI provides a platform for decision-makers to promote knowledge-sharing activities that benefit both the organization and the employee. Introducing AI technologies improves the efficiency of employees by accessing a database of knowledge where organizations explore existing knowledge through interaction among employees and current processes leading to creating new knowledge [2].

Recent research has shown that integrating AI with knowledge must collaborate with emerging technologies and humans, which shows that AI technology cannot handle the whole KM process of the organization, as humans can only transfer TK [1]. In addition, there has been a significant discussion about the possibility of successfully codifying TK where there are strong criticisms on the separation between explicit and TK and the possibility of converting TK to explicit knowledge [12]. Such knowledge is difficult to codify because it is based on intuitions, senses, and emotions that differ from one person to another. A study has shown that for organizations to gain positive outcomes from implementing new technologies, they must establish effective organizational learning and KM processes and promotion practices [13]. The integration of AI in KM to boost organizational innovation is emphasized by several studies, highlighting the key AI tools that improve knowledge sharing

and decision-making, showing their transformative potential [14]. While organizations are integrating AI into KM processes, hesitations due to costs and uncertainty persist. Underscoring KM's role in fostering resilience in a digital workspace, calling for further studies investigating AI's impact on KM, aiming to develop frameworks for improving implementation and understanding of their relationship [15].

On the contrary, some studies highlight the role of AI in transforming KM systems to improve the efficiency and innovation of the organization and its ability to automate tasks such as capturing and retrieving knowledge due to data fragmentation and overload challenges. The utilization of AI in knowledge capture enhances the process of decision-making using predictive analysis, ensuring the significance of human-AI collaboration for the effectiveness of Knowledge Management and the potential to drive the competitive advantage of organizations in this digital era [16].

Moreover, introducing emerging technologies to create a collaborative culture of Knowledge-sharing in organizations requires knowledge to be available to everyone and accessible whenever required, as new technologies contribute to the diffusion of knowledge in organizations [5]. Generative AI technologies such as chat GPT, which was introduced in 2022, have increased the potential of reshaping the landscape of KM by leveraging algorithms of deep learning, introducing new capabilities to enhance the KM process of knowledge creation, storage, KS and Knowledge applications while also the challenges of ethical concerns and accuracy of data are addressed. The study also emphasizes the importance of Human -AI collaboration to minimize potential risks and maximize the benefits of KM practices in the organization[17]. AI can utilize and disseminate Organizational knowledge using technologies such as neural networks and machine learning as utilizing traditional KM systems is not any more effective and suitable in organizations that provide flexible working arrangements such as hybrid and remote working [18].

G. Innovation in KM and organizational Learning

In recent studies, innovation is when organizations develop or improve products, processes, or services to increase the organization's competitive advantage, which is described as transforming knowledge into driving innovation and, hence, producing new services or products [5]. Most of the knowledge that can result in innovative products and services is known as TK which makes organizations gain competitive advantage in today's market. Therefore, the strategy of organizations is to continuously develop new techniques and concepts to encourage innovation across all operations impacting the interaction of employees with each other to improve organizational performance [3].

In addition, some organizations heavily rely on integrating Knowledge-sharing and emerging technologies to develop innovative solutions [2]. The incorporation of AI technologies in organizations has a positive impact on the Human Resources knowledge-based eco-system, resulting in innovative practices in the Human resources function, supporting a continuous learning environment through knowledge-based systems used to capture the knowledge of the organization and is considered a new form of learning in the organization [19]. A recent study has shown that adopting

AI technology and coming up with digital innovations is significant for the growth of the organization and business continuity [10] Studies have also shown that when employees learn using new technologies and gain new knowledge, the organization will adapt to fit the dynamic market and come up with new challenges, which is considered an innovation [14].

Furthermore, recent research has shown that innovation performance is significantly affected by Knowledge-sharing among employees as Knowledge-sharing is a significant aspect of KM, which is the process of transforming skills and experience through activities like innovation. Therefore, it is crucial to strengthen employees' abilities to innovate, which is linked to the organization's innovation capabilities. Innovation is based on the sharing of knowledge, resulting in innovating new business models, services, and processes, which shows that organizations investing in encouraging employees to share knowledge have more chances to innovate than others where Knowledge-sharing has a significant positive impact on the innovative behaviors of employees in the workplace [11].

KM facilitates other significant processes in organizations, such as learning. Effective knowledge transfer management increases employees' knowledge and develops their skills, increasing the diffusion of knowledge in the workplace [5].

H. Summary of Literature Review

TABLE II. SUMMARY OF LITERATURE

Authors	Summary of Research Methods, Contribution to Research Questions & Research Gaps		
	Research Aims	Key Findings	Benefits of AI, TK & OL
Al-Alawi et al. [3]	Investigate the factors that impact the sharing of knowledge among employees.	TK has a significant impact on proper KM & in enhancing organizational learning.	Develops a framework for enhancing Knowledge-sharing and learning practices in organizations and among employees
Cheng et al., [13]	Assess the integration of AI with KM and organizational learning	AI boosts knowledge management in organizations but cannot replace the role of humans in knowledge transfer and has to be in collaboration between humans and AI technologies.	Proper KM, Transformation of TK to explicit and innovation in Organizational Learning
Muthuveloo et al., [8]	Examining the impact of TK on the performance of the organization using the SECI process	The dimensions of Socialization and Internalization, which are part of the TK SECI process, positively impact the organization's performance.	Proves the impact of socialization and internalization on the transfer of Tacit Knowledge

Authors	Summary of Research Methods, Contribution to Research Questions & Research Gaps		
	Research Aims	Key Findings	Benefits of AI, TK & OL
Castaneda et al., [9]	Examine if Organizational learning has been embedded in KM practices	There is a connection between Organizational learning & KM practices, which a tools for enhancing organizational performance	Enhancement of OL strategies to boost KM and innovation in learning techniques
Sanzogni et al., [12]	Exploring the role of AI in TK	AI cannot replace humans in the field of KM as it cannot understand the intuitions and behaviors of itself hence individuals.	Collaboration of AI and Humans for effective TK transfer.
Kuscu , [6]	Adapting computational model for KM in complex organizations	KM is a dynamic system that continuously learns and adapts	Suggests Computational Models for effective KM
Almuslamani & Abdalla, [10]	Investigating the impact of Knowledge-sharing on innovation in organizations	KS enhances innovation but requires high investment in the process of KM	Recommendations for enhancing Knowledge-sharing to enhance innovation
Jarrahi et al., [1]	Explore the integration of AI in KM to enhance the processes of the Organization.	Integration of AI with KM increases OP but needs human input to transfer TK.	Suggests Human-AI collaboration for optimal KM
Olan et al. , [2]	Investigate the impact of AI on KS and OL	Integration of AI and KS boosts OL, leading to sustainability in OP	Suggests creating KM and AI frameworks for influential KS
Chibuzor et al., [5]	Examines the impact on innovation in dynamic markets	KM practices have a significant impact on innovation	Highlights the need for further research to understand the complete picture of TK's role in innovation
Al-Alawi et al. [19]	Examine the impact of AI on innovation in HR functions	AI enhances continuous learning and innovation. OL	Proposed a roadmap to integrate AI in HR functions to enhance OL
Al-Kandari, A., Al-Alawi, A., & Al-Bassam, S. [7]	Examine the role of Organizational Culture in sharing of TK and OL	Cultural factors, trust, organization structures, reward system encourages KS	Highlights the significance of trust in sharing TK and OL

Table II summarizes the Research aims, Key Findings, and Benefits of AI (Artificial Intelligence), TK (Tacit Knowledge), and OL (Organizational Learning).

IV. RESEARCH GAPS

TABLE III. SUMMARY OF RESEARCH METHODS, CONTRIBUTION TO RESEARCH QUESTIONS & RESEARCH GAPS

Authors	Summary of Research Methods, Contribution to Research Questions & Research Gaps		
	Research Methods & Design	Contributions to Research Questions	Identified Research Gaps
Al-Alawi et al. [3]	A study based on a survey on the impact of Organizational Culture on Knowledge-sharing	Emphasizes the impact of Organizational Culture on sharing Tacit Knowledge	Integrating AI in assessing the impact of culture on Knowledge-sharing
Cheng et al., [13]	Mixed Method Approach on AI & KM	Identifies the role of AI in facilitating innovation & KM	Limited focus on AI frameworks for the transfer of Tacit Knowledge
Muthuveloo et al., [8]	Empirical study to test the impact of the SECI process on TK sharing	Validates the impact of 2 dimensions of the SECI process on capturing TK and Organizational performance	Does not explore Artificial Intelligence's potential in automating the SECI processes to capture Tacit Knowledge
Castaneda et al., [9]	Systematic literature review on the integration of KM & organizational learning	provides insights on the integration of Organizational learning and KM	Does not address Artificial Intelligence's role in facilitating Organizational Learning & KM
Sanzogni et al., [12]	Theoretical analysis of AI in capturing Tacit Knowledge	Emphasized the limitations of AI in capturing tacit knowledge	Fails to propose solutions to overcome AI limitations in capturing Tacit Knowledge
Kuscu , [6]	Computational model to adapt KM	Proposes models for KM in complex organizations	Does not provide empirical validation on the integration of AI techniques
Almuslamani & Abdalla, [10]	Case study on the impact of Knowledge-sharing on innovation	Highlights the need for Knowledge-sharing to drive innovation in organizations	Fails to address how AI can optimize the use of resources in KM
Jarrahi et al., [1]	Conceptual framework for AI in capturing knowledge	Emphasized the balance required between AI and humans in capturing knowledge	No clear framework for systematically capturing knowledge with a clear role for each.
Olan et al. , [2]	Fuzzy theoretical approach to the integration of AI with KM	Supports the role of AI in sharing knowledge in a structural way	Does not address the role of AI in capturing TK
Chibuzor et al., [5]	Qualitative approach to the impact of KM on innovation	Highlights the role of TK in driving innovation	Fails to address the role of AI in enhancing the

	Research Methods & Design	Contributions to Research Questions	Identified Research Gaps
			sharing of Tacit Knowledge
Al-Alawi et al. [19]	Empirical study on the impact of AI on innovation in HR	Showcases utilization of AI in HR innovation and Organizational Learning	Limited evidence on the broader role of AI in organizational learning
Al-Kandari, A., Al-Alawi, A., & Al-Bassam, S. [7]	Interviews and Surveys on Knowledge-sharing in Public Sector Organizations	Demonstrates a framework to enhance the sharing of knowledge in organizations	Fails to address the role of AI in facilitating the sharing of knowledge

Table III. summarizes the Research methods & design, the contributions to research questions, and the identified research gaps extracted from the literature review, such as the limitations of AI in capturing TK without exploring how those limitations could be addressed, even though the literature walks through the integration of AI with KM and the importance of Human-AI collaboration, it does not specify a clear framework in capturing TK specifically within the context of Organizational learning and innovation, which justifies the need of the current study to provide empirical evidence and add to the literature in exploring the integration of AI in capturing TK, exploring techniques and systematic frameworks clearly defining the role of AI, Humans and the organization in capturing TK, which will result in increasing the competitive advantage of the organization and innovation in organizational learning.

V. DISCUSSION

The key findings extracted from this literature review suggest that even though AI enhances the processes of KM, humans remain irreplaceable in the cycle of managing knowledge and capturing Tacit knowledge. This emphasizes the significance of a collaborative approach between Humans and emerging technologies to sustain a culture of organizational learning and drive innovation in organizations to gain their competitive advantage, as the involvement of humans will help in mitigating potential challenges such as ethical considerations and data accuracy and maximize the benefits of utilizing AI in the process of KM. The study has also identified the potential of several AI technologies in capturing TK, such as Natural Language Processing (NLP), Machine Learning (ML), Deep Learning, Neural Networks and Data mining, which leads to enhancing the ability of the organization to utilize and share TK and foster innovation.

The findings address the research problem identified by emphasizing the challenges of capturing and interpreting TK in organizations, which AI cannot manage alone. They highlight the necessity of collaborating with humans to achieve the research objectives of improving KM in organizations by identifying ways to encourage employees to share TK and foster a culture of continuous learning and innovation.

The literature review is limited due to relying on existing models and theoretical frameworks that do not fully capture

the challenges and complications in integrating AI to capture TK. In addition, empirical evidence is scarce since the study relies on theoretical discussions and case studies. Furthermore, the limitations of the literature review are due to the limited availability of research in the context of the role of AI in capturing TK, which relies on research conducted on different industries and regions, which is not enough to provide a holistic understanding of the cultural factors that impact the practice of Knowledge-sharing in organizations.

VI. CONCLUSION AND RECOMMENDATIONS FOR FUTURE RESEARCH

In conclusion, the Literature review aimed to explore the Integration of AI in capturing the TK of employees, leading to innovation in Organizational Learning, which has shown that there is no empirical evidence of a specific systematic approach to the role of AI in capturing TK that can fit all contexts and settings, highlighting the challenges and potential barriers to implementing Knowledge-sharing systems such as employees behavior towards the new system, lack of willingness to share knowledge, cost of implementing Knowledge-sharing systems and the cultural factors that influence employees towards Knowledge-sharing.

Based on the research papers derived for this literature review, it has been observed that there is a gap in research in the field of transparent methodologies in utilizing AI to capture TK, which shows the need for conducting future research in this field and the role of organizations in developing strategies to enhance Knowledge-sharing among employees such as reward strategies, spreading awareness, building trust across the organization and innovating social settings, to encourage Knowledge-sharing among employees in the organization and transform TK to explicit knowledge to ensure the sustainability of practices in the organization to gain competitive advantage and thrive in today's dynamic market as knowledge is considered as the primary source of power and a strategic asset that sets the compass of the organizations' success journey.
